

Indiana Seal Concrete Manhole Adapters Installation Instructions

- Check the manhole adapter gasket for compatibility to the pipe OD.
- Check the area where the gasket will seat on the pipe to make sure it's clean and that there are no excessive gouges, projections, dents, etc. that would interfere with the gasket seal.
- Cut a hole in the concrete approximately two inches larger than the OD of the pipe.
- Slide the concrete manhole gasket on the pipe with the grooves of the gasket towards the pipe and the large fin out towards the concrete.
- The pipe and manhole gasket should be positioned so that it is centered in the concrete structure's hole and completely grouted around the gasket filling all voids
